

WARNING ADVERTENCIA

As with other natural and engineered stone products, fabricating this product can expose you to crystalline silica (quartz). The hazards of this product are associated mainly with its processing operations such as cutting, sawing, routing, drilling, grinding, polishing, sanding, demolition, etc. which can generate dust that can expose you to unsafe levels of crystalline silica (quartz) dust. Overexposure to airborne crystalline silica (quartz) is also known to the State of California to cause cancer and, through prolonged exposure, other diseases such as silicosis, tuberculosis, chronic obstructive pulmonary disease, kidney and autoimmune disease if appropriate precautions are not employed.

Therefore, all fabricators, installers and other users engaged in the processing of this product are obligated to comply with all regulatory rules, regulations, ordinances and laws regarding application, workplace monitoring, PPE, and California's Occupational Safety and Health (OSHA) Standard on Respirable Crystalline Silica for General Industry (dir.ca.gov), and California Proposition 65 (www.p65warnings.ca.gov) as well as recommendations in Architectural Surfaces Safety Data Sheet (SDS) to control silica dust exposure and reduce health risks.
